

UltraFlex™

OUR HIGHEST QUALITY POURED-IN-PLACE

UltraFlex is the highest quality, longest lasting rubber safety surfacing on the market. It is a poured-in-place two-layer system that uses a small granule (0.5-1.5mm) TPV for the top surface wear course. Elevated urethane ratios bind the smaller granules together for a superior product.

UltraFlex can be installed as a safety surface for both indoor and outdoor areas. The top layer of UltraFlex uses small granule TPV (thermoplastic vulcanized elastomer). Because this system utilizes a smaller TPV granule, UltraFlex is also a great option for use under swings, slides and other high impact areas.

Advantages:

- Wide variety of colors
- Suitable for all age play areas
- Great for design work
- IPEMA Certified
- Thickness can be modified to meet varying critical fall heights
